Movie Guessing Game

Team members
- Giorgi Samushia
- Terrence Slevin

About the Website

This is a web-based Movie and TV show guessing game. The player will be displayed a Movie or TV show poster without the name on it and then based on the difficulty that they chose they will either have to guess the name from a number of options, or they will have to enter the name exactly. Each answer on normal mode gives the user 1 point, and on hard mode 2 points. The total score is calculated by summing up the TV Show and Movie game scores(40 max). The highest scores of all the users will be displayed on the leaderboard page along with your own high score.

Challenges

Giorgi - One challenge was encountered while trying to pass the score value to the server, as the score was calculated in the javascript file and javascript handles things on the client side. To fix this, I added a hidden input to the php page form, and changed its value dynamically to match the score value. Then, by the get method passed it to the server.

Terrence - The main issue I really encountered whilst working on the project was keeping the css code neat as there were many different div classes I used and so I had to try and use the same classes for multiple different sections in order to try and keep the file size small.

We both learned what it is like to work in a group from this experience. We also learned a lot more about all the coding languages we learned in class(CSS, PHP, JavaScript).
